DRAFT. Some outcomes on this resume are placeholders and not yet confirmed.

Clara Christopher · Content designer · Technical writer

Toronto, ON · clara.christopher56@gmail.com · LinkedIn

Content designer and technical writer for networking and cloud security products. I own the docs for a zero trust security platform, shape the words inside the product, and build the AI tools that keep the docs accurate.

EXPERIENCE

SonicWall, Toronto (remote)

Senior Technical Writer, Cloud Secure Edge · *Feb 2024 – Present*

- Own the Cloud Secure Edge docs end to end, from architecture explainers to setup guides and release notes.
- Find where customers get stuck in support tickets, sales calls, telemetry, and forums, then fix it in the docs and the product.
- Lead content design for the admin console with product, design, and front-end engineering. A trust factor screen rewrite became the pattern for every trust factor, and a redesigned AI setup flow ships next release.
- Reorganized the docs site around the tasks admins come to do, without moving a page or breaking a link. Support now sends customers links to task pages instead of writing answers from scratch.
- Built two AI tools with Claude Code that catch docs drift, one from code changes and one from console releases. Docs updates went from a release-time scramble to a short weekly review.
- Proposed a docs-as-code platform the docs team can change directly, backed by support data and a working prototype. The VP of Product approved phase 1.

Banyan Security (acquired by SonicWall), Toronto (remote)

Senior Technical Writer and Content Designer · *May 2023 – Jan 2024*

- As the company's only technical writer, owned every doc and carried them through the acquisition by SonicWall.
- Restructured the docs' information architecture and taxonomy as the product grew into a full security service edge (SSE) platform.
- Tested FAQs and onboarding flows with generative AI, and used AI search patterns to find gaps in the docs. Filled the gaps that kept turning into support tickets.
- Wrote in-product content for the admin console and desktop app with product, front-end engineering, and UX design.

Technical Writer and UX Writer · *Sep 2021 – May 2023*

- Created the style guide that set one standard and information hierarchy across all docs. Product managers and engineers started using it for their own drafts.
- Audited legacy docs for readability, and turned static manuals into task-based walkthroughs and video scripts.

Tailscale, Toronto

Technical Writer · *Jan 2021 – Sep 2021*

- Wrote knowledge base articles, comparison docs, solution guides, and technical blog posts for developers evaluating zero trust networking.

Quantum XChange, Toronto (remote)

Contract Technical Writer · *Apr 2021 – Aug 2021, alongside Tailscale*

- Wrote the core architecture guides for a quantum-safe key delivery product, turning complex cryptography into clear configuration steps. Sales engineers used them as the reference in customer deployments.

Security Compass, Toronto

Content Specialist · *May 2018 – Nov 2019*

- Wrote enablement content and playbooks for SD Elements, an application security automation platform. Turned security requirements into guidance developers could follow without a security background.

SKILLS

- **Content:** content design, information architecture, content strategy and governance, structured content, docs-as-code.
- **Tools:** Claude Code, Git, GitHub, GitLab, Markdown, YAML, Antora, Docusaurus, Jekyll, REST APIs, OpenAPI, Figma, Jira.

EDUCATION

Bachelor of Arts, Philosophy, McGill University · First-class standing in philosophy
